Personal portfolio project

- Deployed a three-tier Next.js, Flask and PostgreSQL application to **AKS**; provisioned Azure infrastructure and the CI identity with **Terraform**, and packaged workloads with **Helm**.
- Built **GitHub Actions** checks for secret detection, Terraform validation, Helm rendering, container startup and vulnerability scanning; configured **Trivy** to fail on High or Critical findings.
- Configured **OIDC-based Azure authentication** for CI and commit-SHA image tags in **ACR**, avoiding stored cloud passwords and linking image versions to source commits.
- Implemented **Argo CD** delivery from version-controlled Helm configuration, with pull-request-based image updates and manual synchronization after reviewing deployment diffs.
- Configured backend startup, readiness and liveness probes, resource requests and limits, **PostgreSQL persistent storage**, and non-root application containers.
- Resolved a database-driver dependency failure; pinned backend dependencies and added a **Bash smoke test** against temporary PostgreSQL to check health and product API responses before image publishing.
